Teacher's Tools | Classroom Activities

Activity—Variations

Editions used: Integers.

To practice addition and subtraction of integers, give each student in the class an INTEGERS card. (If you are using this activity in conjunction with the First In Math program website, display an Integers card on your whiteboard or screen).

Students can begin by choosing a number, and then adding all four numbers clockwise around the circle.

Example:

$$1 + -5 = -4$$

$$-4 + -1 = -5$$

$$-5 + 6 = 1$$

To increase the difficulty, have students experiment by working counterclockwise, beginning with a different number or using other operations.
